Summary

Full-Stack Software Engineer with industry experience building scalable, end-to-end web applications. Expert in designing multi-tenant architectures and RESTful APIs using .NET, Spring Boot, and Node.js, paired with React/Next.js frontends. Proven track record of delivering secure, containerized solutions in Agile environments.

Education

- Zewail City for Science and Technology** Giza, Egypt
B.Sc. Computer Science (Software Development focus) Oct. 2022 – June 2026

Experience

- Konecta Egypt** Cairo, Egypt
Full Stack Developer Intern | Best Intern Across All Tracks May 2025 – Aug. 2025
 - Best Intern Across All Tracks** – selected company-wide for technical contributions and leadership
 - Built and maintained production full-stack applications with **React**, **Next.js**, **Node.js**, **Spring Boot**, and **.NET**; designed and optimized **PostgreSQL** schemas and queries; deployed via **Docker** and **CI/CD** pipelines
 - Collaborated with 8+ developers on Agile sprints: code reviews, debugging production issues, and delivering features under deadline
- Waed Company** Cairo, Egypt
Backend Developer May 2024 – April 2025
 - Developed **RESTful APIs** using **Node.js** and **Express** within a MERN-based architecture
 - Implemented authentication, authorization, validation, and centralized error handling to improve system reliability
 - Designed **MongoDB** and **PostgreSQL** schemas and optimized database queries
 - Added structured logging and collaborated with frontend and QA teams to diagnose and resolve production issues

Technical Skills

Languages: C#, Java, JavaScript, Python, Dart

Backend: .NET, Spring Boot, Node.js, REST APIs, Microservices, Authentication, RBAC

Frontend: React, Next.js

Mobile: Flutter

Databases: PostgreSQL, MongoDB, SQL, Database Design, Transactions

DevOps & Tools: Docker, CI/CD, Linux, Git, RabbitMQ

Concepts: OOP, Design Patterns, API Design, Distributed Systems, Unit Testing, Integration Testing,

Projects

- Multi-Tenant POS Platform** | Distributed Retail [🔗 Code](#) July – Aug. 2025
 - Built event-driven microservices using **.NET**, **Spring Boot**, **RabbitMQ**, and **PostgreSQL**
 - Implemented multi-tenant data isolation and **RBAC** to support multiple stores within one system
 - Designed API Gateway and inter-service communication architecture
 - Containerized the platform using **Docker** and **Traefik** for scalable deployment
- AI Comment Generator** | LLM-Powered Documentation [🔗 Code](#) Dec. 2025 – Jan. 2026
 - Developed LLM-powered documentation generator using **FastAPI** and **Ollama**
 - Designed multi-agent generator/validator pipeline with security filtering and hallucination detection
 - Implemented evaluation metrics to measure documentation quality and response latency
 - Supported documentation generation for 20+ programming languages
- Sehhi** | Cross-Platform Mobile [🔗 Code](#) Jan. – Feb. 2026
 - Built Flutter mobile application consuming REST APIs for health data
 - Implemented **Firebase Authentication** and persistent sessions
 - Added push notifications using **Firebase Cloud Messaging** and offline caching
 - Applied clean architecture separation (service/repository pattern) for maintainability
